AI DIGITAL SOCIETY · THE FULL SYSTEM

The Faceless *Content System.*

One working session a week builds all your Facebook and Instagram content, and it posts itself. **No face. No tech skills. Every step explained with pictures.**

For anyone building a faceless page

You need Claude and Google Drive. Blotato is optional

Time one working session a week

By Josée Bédard

ABOUT ME

i have not had a job *in over 17 years.*

Hi, I'm Josée. For more than 17 years I have run my own businesses, full time. No boss. No job to go back to. Just me, building things online.

Over those years I built my own digital products and affiliate offers. Over 30,000 products sold. A top 3% affiliate. A Facebook community of 140K.

I also made the mistakes. I tried schemes that earned nothing. I ran a marketing agency on 80-hour weeks, until my body said stop.

So I rebuilt quietly, with no face on camera and no staff. I built AI helpers that do the work, and it is the best work life I have had.

17+	30,000+	Top 3%
years working for myself, full time	products sold	affiliate

That is why this system is simple. I am not a teacher who read about it. I run several pages with it every week, and I wrote down exactly how.

START HERE · WHAT YOU DOWNLOADED

what is in your download. *Two things.*

When you buy, you get two things. Here is what each one is, and what to do with it.

1 · THIS GUIDE (A PDF)

PDF

What it is: the book you are reading right now.

What to do: open it and read it page by page, like a book. There is nothing to install.

2 · A ZIP FILE (THE BONUS)

ZIP

What it is: a file called **faceless-content-system.zip**.

What to do: do **not** open it. Claude takes it exactly as it is. You will add it to Claude on page 6.

what is a zip file?

A zip file is a folder squeezed into one single file, so it is easy to send. Think of it like a suitcase. Claude opens it by itself.

PLEASE DO NOT DOUBLE-CLICK IT

If your computer opens the zip, just close that window. Nothing is wrong.

what is the zip for?

It is a **skill**. A skill teaches Claude my whole method. Once it is added, you can say "Use the faceless-content-system skill," and Claude already knows the steps, the checklists and the rules.

DO I HAVE TO USE IT?

No. Every prompt in this guide works without it, because you paste them in yourself. The skill just saves you typing and keeps Claude on track.

START HERE · SET UP CLAUDE (PART 1 OF 2)

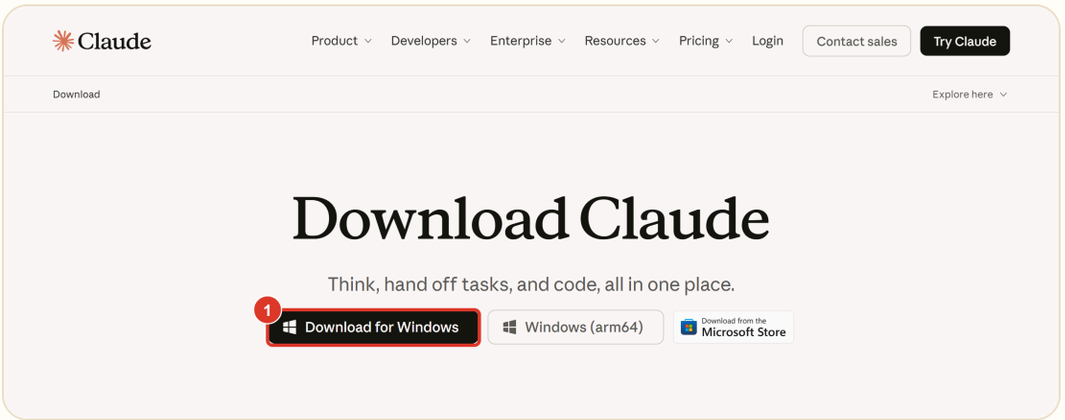

download *claude.*

Claude is the AI helper that does the work. You will put it on your computer like any other program. It takes about five minutes.

1 Open the download page

Do this: open your internet browser (Chrome, Edge, or Safari). Click the long box at the very top and type **claude.com/download**. Press Enter.

You will see: a page that says **Download Claude**, like the picture below.

(1) Click the big black button. On a Mac it says "Download for macOS" instead.

2 Open the file you just downloaded

Do this: when the download is done, your browser shows the file at the top or bottom of the window. Click it. If you cannot find it, open the **Downloads** folder on your computer.

You will see: a small window while Claude installs itself. Just wait. You do not need to change anything.

Why: the app is one click away and can work with your folders.

3 Make your free account

Do this: when Claude opens, click **Continue with Google** or type your email. Claude sends you a code or a link. Type the code in, or click the link.

You will see: a short welcome. Say yes to the questions, then it opens a new chat.

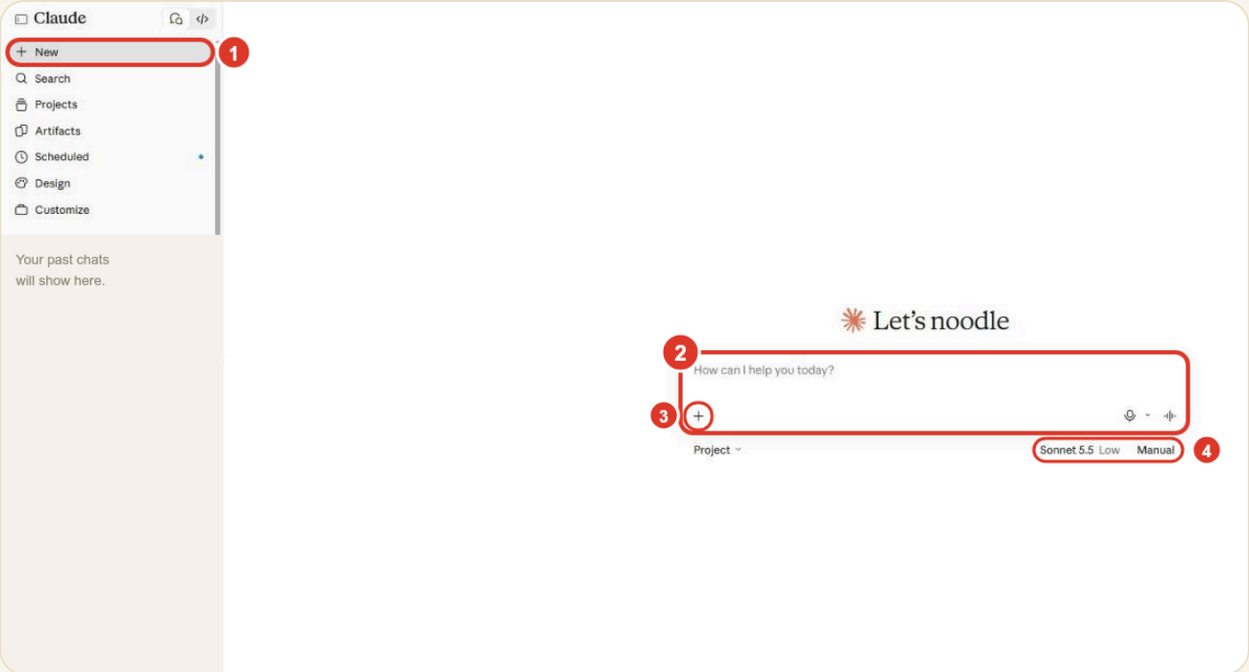

Prefer the website? Go to **claude.ai** and sign up there. It works the same way.

FREE OR PAID?

Start free if you like, but plan to upgrade (about $20 a month) before your first full week. Free Claude runs out of usage and stops.

find where *you type.*

This is your whole Claude screen. Everything you do in this guide happens here. Look at the numbers.

1. **New:** click this any time to start a fresh chat. Start a new chat for each new job.
2. **The typing box.** Click inside it and type what you want, like you are texting a friend. Press Enter to send.
3. **The plus sign:** click it to add a file or a picture, like your Content Board picture.
4. **Which Claude is answering.** Leave this as it is. It is already set.

4 Say hello

Do this: click the typing box, type **Hello! What can you help me with?** and press Enter.

You will see: words appear on the screen, one after the other. That is Claude answering. You are ready.

Your screen may look a little different. The menu on the left will also show your past chats. That is normal.

START HERE · ADD THE BONUS SKILL

add the zip *to claude.*

Do this once, after Claude is on your computer. It takes about two minutes.

1 Find the zip file

Do this: open your **Downloads** folder. Look for **faceless-content-system.zip**. Leave it zipped.

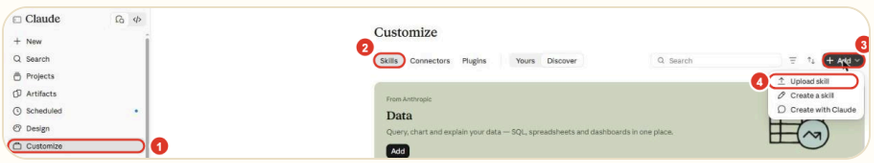

2 Turn on one setting first

Do this: in Claude, open **Settings**, then **Capabilities**. Switch on the setting called **Create and edit files**. On some screens it says **Code execution and file creation**.

Skills need it. It is free, and it works on the free plan too.

3 Open Claude and find the Skills page

Do this: in Claude, click the numbers in this order.

1. Click **Customize** in the left menu.
2. Click **Skills**.
3. Click **Add**.
4. Click **Upload skill**.

4 Choose the zip file

Do this: pick **faceless-content-system.zip** from your Downloads folder and click **Open**. Or drag the zip onto the box if you see one. Do not unzip it.

You will see: faceless-content-system appears in your list of skills. Make sure the switch next to it is on.

5 Test it

Do this: start a new chat and type: **Use the faceless-content-system skill. What can you help me do?**

You will see: Claude says it can build your week and set up the board. It worked.

DO NOT SEE "UPLOAD SKILL"?

Menu names change now and then. Ask Claude: "How do I add a skill?" Or skip it. You do not need the skill to follow this guide.

START HERE · TWO MORE THINGS CLAUDE NEEDS

give claude *your folder and a browser.*

Claude makes your posts as files on your computer, and it picks your photos and music from the web. For that it needs two things. Do them once.

1

Make a folder, and let Claude use it

Do this: on your desktop, right-click, choose **New**, then **Folder**, and name it **FACELESS PAGE**. This is where Claude saves everything it makes.

Then: in the Claude app on your computer, tell Claude to use that folder. Type: **Please work in my FACELESS PAGE folder.** When Claude asks for permission to use the folder, say yes and pick it. Claude lists the folders you allow in **Settings**, under **Trusted folders**.

Test it: type **Make a file called hello.txt in my FACELESS PAGE folder.** Then open the folder. If the file is there, it worked.

Good to know: Claude can only use your computer's folders while the Claude app is open. Use a folder just for this, so Claude never touches your other files.

2

Add Claude to Chrome (for photos, videos and music)

Do this: open Google Chrome. Go to the Chrome Web Store and search for **Claude**. Click **Add to Chrome**, then sign in with your Claude account. Click the puzzle piece in the Chrome toolbar and pin Claude.

Why: this lets Claude open Pexels and Pixabay for you, search, and download free photos, videos and songs. Without it, you would pick and download each one yourself.

Important: Claude in Chrome only works on the paid Claude plans. This is one more reason to get the paid plan. It works in Chrome only, not in other browsers.

Test it: open the Claude panel in Chrome and type **Open pexels.com and tell me what you see.**

DOES YOUR SCREEN LOOK DIFFERENT?

Claude changes its menus now and then. Ask Claude: "How do I let you use a folder?" or "How do I add Claude in Chrome?" It will walk you through your own screen.

START HERE

how to use *this guide.*

Posting by hand every day does not last. This system turns it into one working session a week. You do the thinking and the saying yes. Claude does the building.

1. Show Claude posts you like
2. Claude builds your week
3. You look and say "go"
4. Upload to Google Drive
5. It posts itself

Your whole week, in five steps.

every step looks the same

DO — **Do this**

The small thing to do, in order. One action at a time.

SEE — **You will see**

What should show up on your screen, so you know it worked.

WHY — **Why we do this**

One short line, so the step makes sense.

READ ONE CHAPTER AT A TIME

You do not have to read it all today. Read a chapter when you reach that step. If a word is new, it is explained on the next page.

PLAIN WORDS

seven words, *explained.*

Claude

The AI helper you type to. You say what you want, and it writes back.

Prompt

The message you type to Claude. You copy mine and change the words in [brackets].

Brain file

A short page of instructions about you. Like a note you leave for a new helper, so every week looks the same.

Pool

A waiting room for your finished posts. Each post waits there for its day and time.

Morning sender

A small helper that wakes up every morning and sends tomorrow's posts to Blotato.

Blotato

The tool that posts for you, on the day and time you pick.

Content Board

One page that shows every page you run and every day, so you can see what is ready and what is missing. You can add it later.

THIS IS A METHOD, NOT A PROMISE

I do not share income numbers. Your results depend on your topic, your consistency and your offers. Everything here is about building a reliable content engine.

DO NOT DO IT ALL AT ONCE

start small, *grow slowly.*

I run several pages with three kinds of posts. You should not begin there. Build up in this order, one week at a time.

1

Week 1: one page, text posts only

Post one or two text posts a day. Build your brain file and your free guide. That is the whole job this week.

2

Week 2: add picture posts

Start with one layout. Begin using the pool and the morning sender, so your posts go out without you.

3

Week 3: add Reels

A Reel is a short video. Keep them short and simple at first.

4

Week 4 and later: grow

Add the Content Board, your weekly backups, and more pages once the first one runs smoothly.

WHY THIS ORDER?

Most people quit because they try to do everything in week one. A calm start means you are still posting in month three.

the tools. *All of them.*

Plans and prices change, so check each tool's own site. You already set up Claude at the start. The next pages show you Blotato and Google Drive.

TOOL	WHAT IT IS, IN PLAIN WORDS
Claude	The AI helper that writes your posts and builds your pictures and Reels. A paid plan (about $20 a month) is strongly recommended, because a full week is a big job.
Blotato	Optional, but it saves you hours. It posts for you on Facebook and Instagram, and can send a link by message when someone comments a keyword. The next page shows why.
Google Drive	Free online storage from Google. Your finished pictures and Reels live here, so Blotato can find them.
Pexels	A free website with photos and videos you can use. Claude picks from it.
Pixabay	A free website with music you can use. Claude picks from it.
A Facebook Page	Where your posts go. A Page is not your personal profile. Instagram is optional (it must be a business account).
A free-download page	Where people get your free guide. Any simple page where people can download a file works.
Pinterest (optional)	One business account with a board per page, to send people to your own links.

PLEASE GET THE PAID CLAUDE PLAN

You can try the first steps on the free plan. But free Claude has a small usage limit, so it stops part way through a big job like building a week of content, and you have to wait. The first paid plan (called Pro) is $20 a month when you pay monthly, or $17 a month when you pay for the year. Claude says it gives at least 5 times more usage than Free. I strongly recommend it for this system. Prices change, so check **claude.com/pricing**.

why blotato? *It saves you hours.*

You do **not** have to use Blotato. Claude still writes and builds everything without it. Blotato does one job: it **posts for you**.

POSTING BY HAND

For every single post you must:

1. Open Facebook
2. Upload the picture or Reel
3. Paste the words
4. Pick the day and time
5. Add the first comment
6. Do it again for Instagram

WITH BLOTATO

You do it once:

1. Claude builds the week
2. Posts line up in the calendar
3. Blotato posts each one on the right day, at the right time, on every page you connected
4. You check the calendar and go live your life

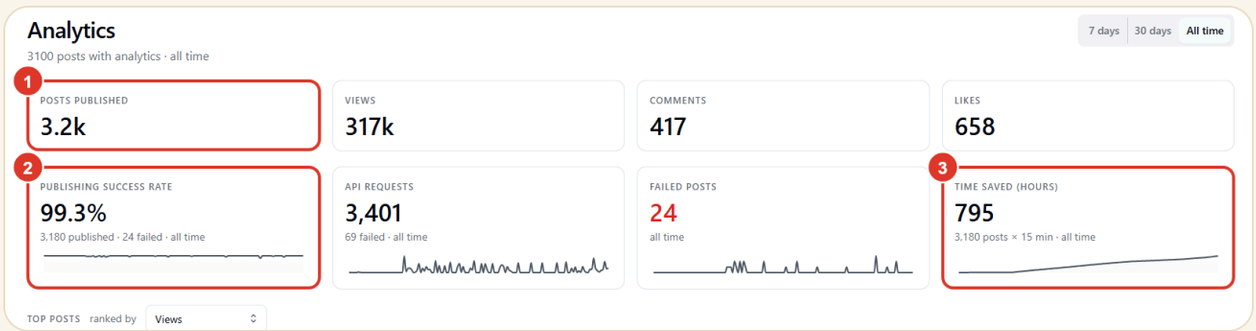

What this saves you

JOB	BY HAND	WITH BLOTATO
One week of posts (about 20)	About 1.5 to 2 hours of clicking	A few minutes to look over the calendar
More than one page, or Instagram too	Do the whole job again for each one	Same few minutes
"Comment a word, get the guide"	Watch comments all day, message each person yourself	Blotato sends the link for you, even while you sleep

These times are my own rough estimate. Yours may be shorter or longer.

my real numbers, *from my own account.*

This is a screenshot of my own Blotato Analytics page. Nothing is edited. It shows what happens when you stop posting by hand.

1. **3.2k posts published.** That is 3,180 posts sent for me, on the right day and time, without me opening Facebook to post each one.
2. **99.3% success.** Almost every post went out on its own. A few failed, and that is why you glance at your calendar.
3. **795 hours saved.** Blotato counts 15 minutes saved for every post. 3,180 posts times 15 minutes is 795 hours. That is its own count, and your time will differ.

WHAT THIS MEANS FOR YOU

A week of posts is hours of clicking by hand. With Blotato it is a few minutes of looking at a calendar.

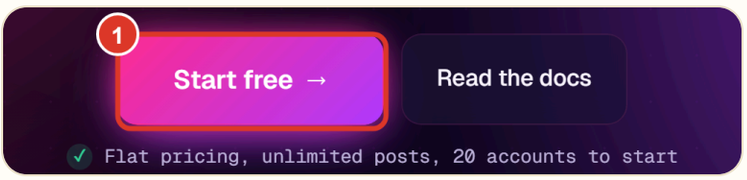

MY HONEST ADVICE

If you do not want to pay yet, start by hand. Claude will still do the hard part: the writing, the pictures, the Reels. You post them yourself using Facebook's own free scheduler. When the clicking starts to feel like a job, that is the day Blotato pays for itself. Nothing else in this guide changes when you add it later.

get blotato, *your posting helper.*

1 Make your Blotato account

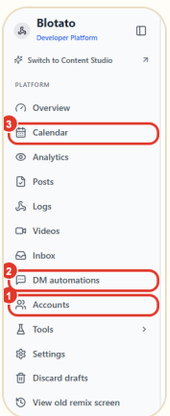

Do this: go to **blotato.com/?ref=josee** and click **Start free**. Make your account.

That is my affiliate link. If you sign up through it, I may earn a commission, at no extra cost to you.

2 Know where things are

You will see: a menu on the left side. These three are the ones you need.

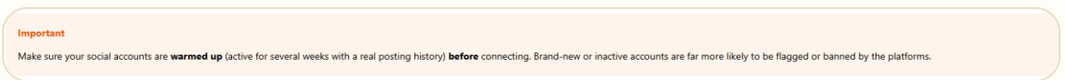

(1) Accounts: where you connect your Facebook Page and Instagram.

(2) DM automations: where you set up the "comment a word, get a link" helper.

(3) Calendar: where you see your posts by day.

! Read this before you connect anything

Why it matters: a brand new, empty Page is more likely to get flagged. Post by hand for a few weeks first, then connect it.

a place for *everything.*

1 Make a folder on your computer

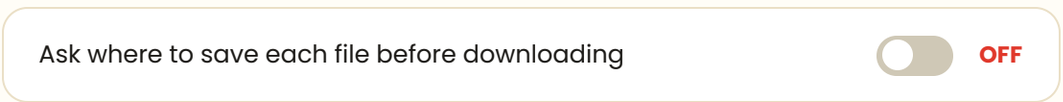

Do this: right-click on your desktop, choose New, then Folder, and name it **FACELESS PAGE**. This is where Claude saves everything it builds, so you can check it.

```
FACELESS PAGE
  ├ CONTENT RULES.md
  ├ WEEK 7 - Dec 4 to Dec 10
  │   ├ 2026-12-04_text_01.txt
  │   ├ 2026-12-04_pic_01.png
  │   └ 2026-12-04_reel_01.mp4
  └ WEEK 8 - Dec 11 to Dec 17
```

What your folder will look like after a few weeks.

2 Tell Chrome to save files without asking

Do this: in Chrome, click the three dots at the top right, then Settings, then Downloads. Turn **off** the switch called "Ask where to save each file before downloading".

Why: Claude downloads clips for you. If Chrome asks every time, it gets stuck waiting for you.

3 Open Google Drive

Do this: go to **drive.google.com** and sign in with your Google account (the same one as Gmail). If you do not have one, make one first. It is free.

Why: your finished pictures and Reels will live here. Blotato reads them from here when it is time to post.

CHAPTER 2 · STEP ONE

first, let claude *interview you.*

The very first thing you ask Claude is to interview you and build your **brain file**. This is a short page about you, your page and how you write. Claude reads it before it makes anything, so every post sounds like you.

A

Paste this into a new chat

Do this: open a new chat in Claude, click the typing box, paste this, and change the words in [brackets].

PROMPT · INTERVIEW ME AND CREATE MY BRAIN FILE

```
Interview me and create my brain file.
I am starting a faceless Facebook page. My idea: helping [WHO] do [WHAT] without [THE PROBLEM THEY FEAR].
Ask me one question at a time. Use simple words. Wait for my answer before the next question.
Cover: who I help, my voice and the words I never use, my colors and fonts, my offers and links, and my comment words.
Add these rules at the top: no faces, no prices, no income claims, no ages. Only mention offers that are listed in my brain file.
When we are done, show it to me. Then save it in my folder as CONTENT RULES.md.
```

B

Answer like you are talking to a friend

Do this: type short answers, one question at a time. If you do not know an answer, say "I do not know, help me." Claude gives you choices.

Why: your own words are what make the posts sound like you and not like a robot.

C

Check it, then lock it in

Do this: read what Claude wrote. Not right? Say "Change the voice part" or "Redo the colors." When you love it, say **"I like this. Save it."**

You will see: a file called **CONTENT RULES.md** in your FACELESS PAGE folder. That is your brain file. From now on, start every new chat with: **"Read my brain file first."**

CHAPTER 2 · STEP TWO

do not start alone. *Ask Claude first.*

Before you click anything on Facebook, ask Claude to build your page **launch kit**. Claude does the thinking. You only choose.

A

Tell Claude about your page

Do this: open a new chat, click the typing box, and paste this. Then change the words in [brackets] to yours.

PROMPT · CREATE MY PAGE LAUNCH KIT

```
Read my brain file first. Then create me a launch kit for a new faceless Facebook
page.
My idea: helping [WHO] do [WHAT] without [THE PROBLEM THEY FEAR].
My colors: [for example black, gold and cream]. The look: [calm, modern, simple].
No faces.
I will attach pictures of pages I like. Match their style, but do not copy them.
Please give me:
1. Ten short page names. Easy to say, about the topic, not about me.
2. The one you would pick, and why.
3. My page description: a bio and a three-line About section. No prices, no income
claims.
4. A logo for the profile picture. Flat, clear when tiny. Save it as a picture
file.
5. A wide cover picture, words in the middle. Save it as a picture file.
6. Five ideas for my first posts.
```

B

Show Claude examples

Do this: find three to five Facebook pages you like. Take a picture of each screen (on Windows press the Windows key + Shift + S, on a Mac press Shift + Command + 4). In Claude, click the plus sign and add those pictures to your message.

Claude can see what you like, which is faster than describing it.

C

Pick, then ask for changes

Do this: read the names and pick your favorite. Not happy with something? Say "Redo the logo, make it simpler" or "Make the cover darker." Claude redoes it as many times as you like. When you love it, tell Claude: **"I like this. Lock it in."**

You will see: the logo and the cover as picture files in your folder. The next pages show how to put them on Facebook.

pick your promise, *name, and start.*

1 Pick one clear promise

Do this: this is the sentence you gave Claude: "Helping *who* do *what* without *the problem they fear*."

Mine is: helping everyday people use AI to build online without showing their face.

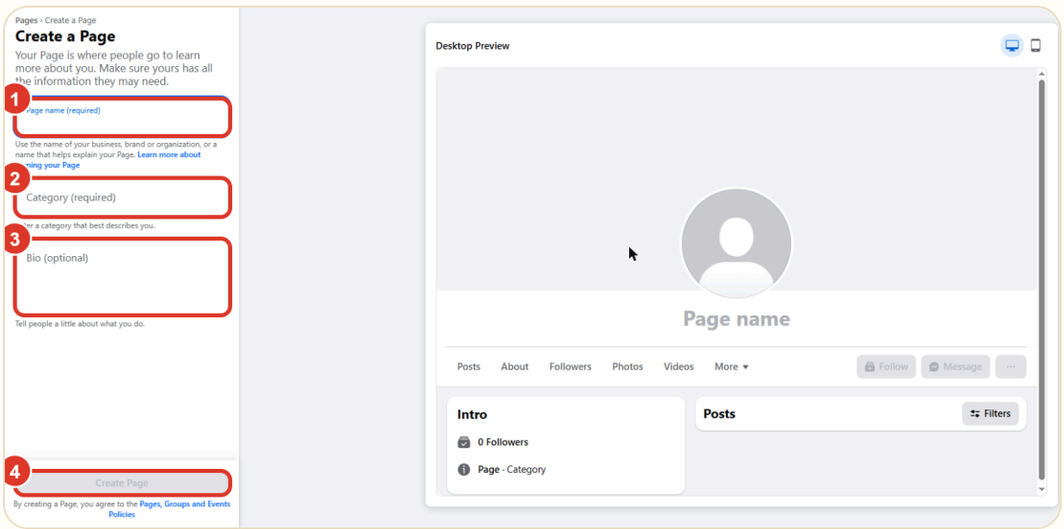

Why: one clear promise tells people why to follow you.

2 Choose the page name

Do this: use the name you picked from Claude's list. A good name is short, easy to say, and about the topic, not about you. If you could say it out loud on a podcast and it still made sense, it works.

3 Create the page

Do this: in Facebook, open the menu, click Pages, then Create new page. You will see this form.

1. Type your page name.
2. Pick a category that matches your topic.
3. Write a short bio from your promise sentence.
4. Click Create Page.

Why a Page? A Page is separate from your personal profile, so no one sees your name unless you add it.

logo, cover *and About.*

4

Add the logo Claude made

Do this: on your new Page, click the round picture circle and upload the logo file from your folder. It should be a simple mark plus the page name, flat and easy to read when tiny. I use a gold mark on black with the name underneath. Want a change? Tell Claude.

Why: your logo shows up as a small circle next to every post. It has to be clear when it is small.

5

Add the cover Claude made

Do this: on your Page, click the wide cover area and upload the cover file from your folder. Mine is a night sky with a gold line and my promise across it. The words stay in the middle.

Why: Facebook crops the cover differently on phones and computers. Words in the middle never get cut off.

6

Paste the About section

Do this: copy the three-line About Claude wrote. Line one: your promise. Line two: who it is for. Line three: where to get your free guide.

Not in the About section: no prices and no income claims.

PICK YOUR COLORS NOW

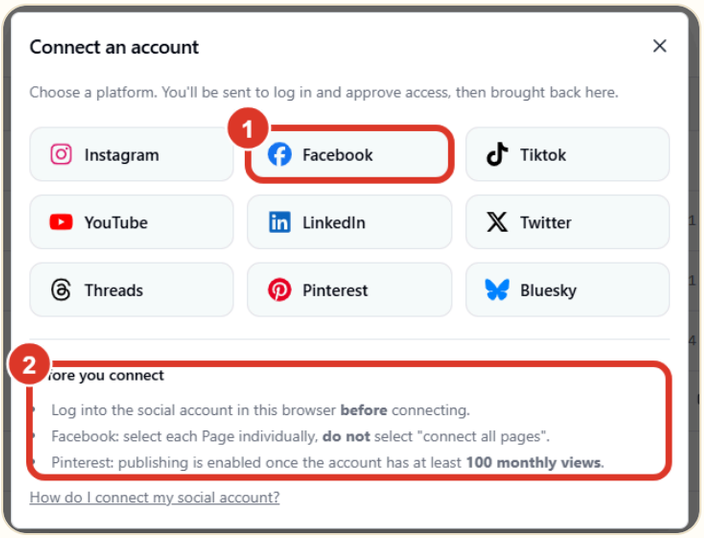

You told Claude your colors in the launch kit. Now make sure the exact color codes are in your brain file too. Then every picture and Reel will match.

connect your page *to Blotato.*

7

Connect your page to Blotato

Do this: in Blotato click **Accounts**, then **Connect account**. You will see this window.

1. Click Facebook.
2. Read these tips. Log in to Facebook in this same browser first. Select each Page one by one, and do **not** choose "connect all pages".

your free guide, *words, and rhythm.*

8

Ask Claude to make your free guide

Do this: do not make it alone. Open a new chat, attach this guide (or the free guide you got) so Claude can see the look, and paste this.

PROMPT · MAKE MY FREE GUIDE

```
Create my free guide. It is a short PDF that helps [WHO] with one small problem:
[PROBLEM].
Make it a nice PDF in my colors: [colors and codes]. Use the same look as the guide
I attached: same fonts, layout and spacing.
Write it in simple words a fifth grader understands. Short sentences.
Add pictures or drawings that help explain each step.
Include a cover, a short intro, easy steps, and a last page that says what to do
next.
No prices, no income claims. Save it as a PDF in my folder.
```

Then: say "Redo page 3" or "Make it simpler" until you love it. Then say "I like it." Put the PDF on a simple free-download page. Everything on your page points to it.

9

Pick your comment words

Ask Claude: "Give me four plain comment words for my posts, one for each link." Keep the list very short. Chapter 7 shows how a word sends your link.

10

Decide your daily rhythm

Ask Claude: "Plan a small daily rhythm for my page that I can keep up." Mine is 4 text posts, 4 pictures and 4 Reels a day. Start smaller. Consistency beats volume.

the most important *file in the system.*

It is one short page that tells Claude who you are and how you write. Claude reads it before it makes anything. With it, week twelve looks like week one.

PART	WHAT TO WRITE
Brand	Your promise, who you speak to, "no face", your logo.
Voice	How you sound. Words you never use. No income claims. No prices.
Offers	Your real products and free guide, with links.
Formats	The size and look of each post type.
Keywords	Your few comment words and what each one sends.
Review rule	"Show me everything first and wait for my go."

two rules I never break

1 **Model it, never invent it**

Every kind of post starts from an example I show Claude. Claude copies the pattern, then swaps in my topic. Want a new style? Show it a new example.

2 **Real offers only**

Claude may only mention products that really exist and are listed in the file. That stops made-up courses and wrong links.

Do this: ask Claude to write your first version with Prompt 1 in the last chapter. Then edit it. Update it whenever you change your mind.

text, pictures *and Reels.*

Every page uses a mix. A mix keeps the feed interesting and shows you what your audience likes.

T

Text posts

1. Facebook only. No picture at all.
2. Copied from patterns that already work, like "Here's exactly how I'd do it, step by step", numbered lists, and a surprise opening line.
3. Saved as plain text files. Each ends with a FIRST COMMENT line.
4. Posted three or four times a day: morning, afternoon, evening.

One of my real Reels

R

Reels (short videos)

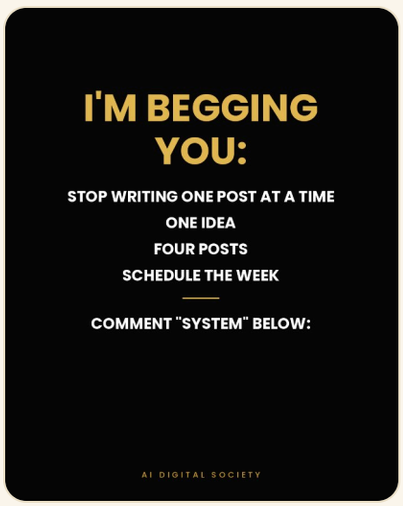

1. Tall, 1080 by 1920, and 10 seconds long.
2. A Pexels video behind the words and a Pixabay song. A new video and a new song every time.
3. The words "(READ CAPTION)" fade in partway through.
4. Check every clip for people and animals. This is a faceless page.

WHY 10 SECONDS?

Short Reels are quick to make and easy to check. You can make them longer later.

five layouts, *one per day.*

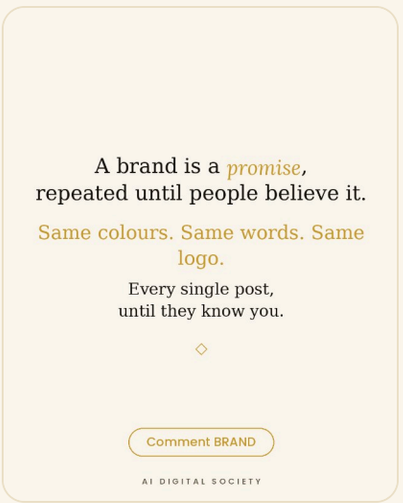

Using a different layout each day stops your feed from looking the same. Every picture is 1080 by 1350 pixels, with a round "Comment WORD" button near the bottom and a small page name at the foot.

1 Black + gold hook

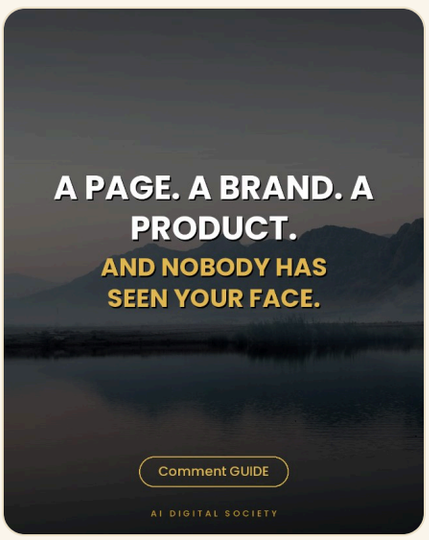

2 Infographic

3 Cream quote

4 Cream + logo

5 Photo + overlay

These are real posts from my own pages, made by Claude.

THE CAPTION

Each picture gets a long caption, 180 to 320 words, with a numbered list in it. The order is: a hook line, why it matters, the steps, a closing thought, and then the keyword line.

LAYOUT 5

It uses a dark, moody photo from Pexels with a see-through black layer on top, so the white and gold words are easy to read.

your working session, *part one.*

This is the heart of the system. Put one session in your week for it. Open Claude and begin.

1

Tell Claude which week you want

Do this: open a new chat and type something like: "Build week 7, Dec 4 to 10, for all pages. Read my brain file first."

You will see: Claude repeats the dates, how many posts per day, and the folder name. Say yes if it is right.

2

Give new examples

Do this: saw a post or Reel that works? Paste it or take a screenshot and give it to Claude.

Why: Claude adds it as one more angle. The older styles stay, so the week gets more varied.

3

Claude writes the text

You will see: a new dated folder with every text post, every caption and every first comment, saved as files.

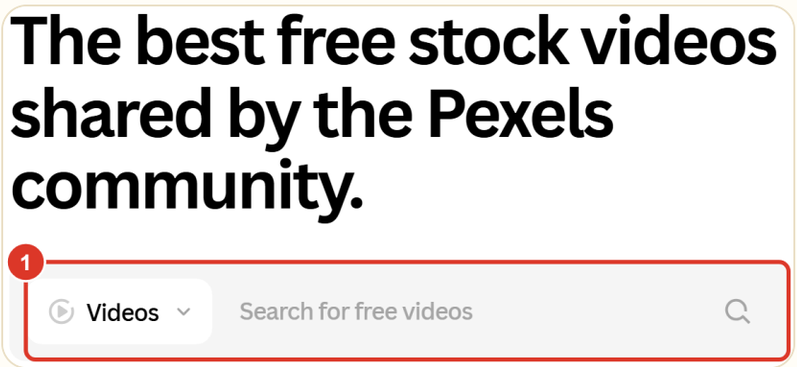

YOUR PART IS SMALL

Open the chat. Say the week. Give examples. Look at the result. Say go. Claude does the rest of the work.

where the clips *and music come from.*

4 Claude picks videos and photos on Pexels

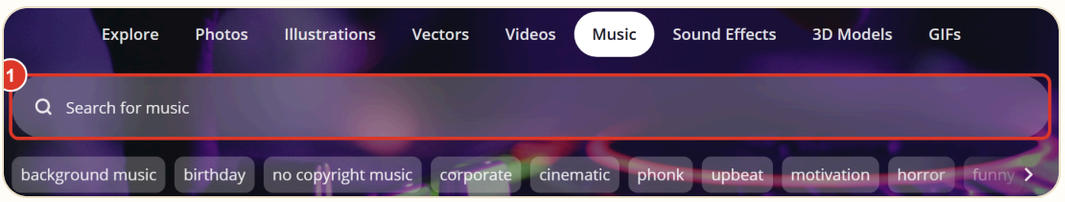

You will see: Claude opens Pexels in Chrome, searches, checks each clip for people and animals, and downloads it. If a clip fails or shows a person, it picks another.

(1) Pexels, at **pexels.com**. Free videos and photos.

5 Claude picks the music on Pixabay

You will see: the same thing on Pixabay: calm piano or cello, free to use, and a different song for every Reel.

(1) Pixabay music, at **pixabay.com/music**. Free songs.

WHY?

The clips and songs are free to use. A new clip and a new song for each Reel means nothing repeats across the week.

claude builds, *you check.*

6 **Claude makes the pictures**

You will see: picture files appear in your folder, one for each post. Claude makes them on your own computer, with your colors and fonts.

7 **Claude makes the Reels**

You will see: video files appear. Each is 10 seconds, with a clip, a song and your words.

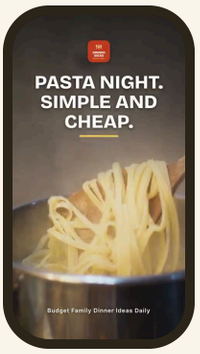

A picture post

A brand is a *promise*,
repeated until people believe it.

Same colours. Same words. Same logo.

Every single post,
until they know you.

◇

A 10-second Reel

say go, *and upload.*

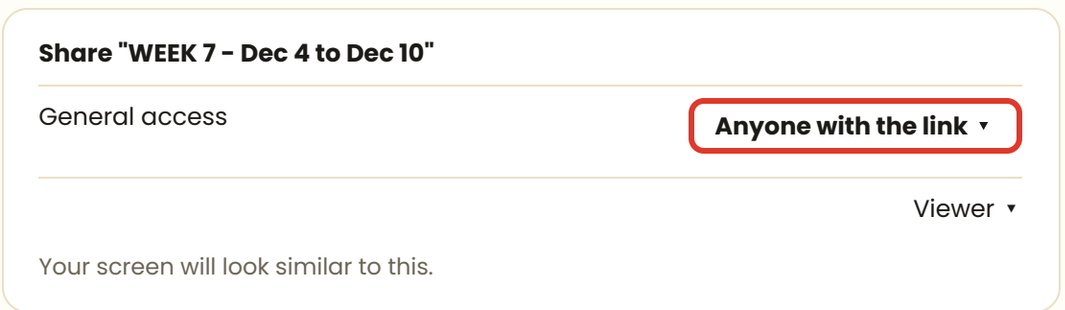

9 Say "go"

Do this: when you are happy, type "go" to Claude.

Why: nothing is scheduled until you say it. This one rule keeps you in control.

10 Upload the week's folder to Google Drive

1. Go to **drive.google.com**.
2. Click New, then Folder upload, and pick that week's folder.
3. Right-click the folder in Drive and click Share.
4. Under "General access", choose **Anyone with the link**.

Your screen will look similar to this.

Why: Blotato needs a link it can open to get your pictures. The file names start with the date, so you never upload the same thing twice.

file it, *then clean up.*

11

Claude fills the board

Do this: tell Claude: "Read this week's folder and update my board." Give it the Drive link. Chapter 6 shows the easy way.

You will see: Claude matches each picture and Reel to its post and puts every post in the pool, each with its date and time. Chapter 6 shows what the pool is.

One pool entry (a small card)
page: ads_fb **date:** 2026-12-04 **time:** 9:00 AM **kind:** pic
text: "Your first garden does not need a big yard..."
firstComment: "Tell me what you cook most." **status:** pending **batch:** Week 7
mediaUrl: your Google Drive link for the picture

This is Claude's own note for one post. You never type these.

12

Look at the Content Board (optional)

If you use the board (chapter 9), the week's days turn purple. Purple means "created and waiting".

13

Clean up your computer

Do this: delete the raw clips, songs and photos from your Downloads folder.

Why: the finished posts are safe in Drive. The raw files only take up room.

HOW BIG IS A WEEK?

For one page with 4 text posts, 4 pictures and 4 Reels a day, that is 28 text posts, 28 pictures and 28 Reels. It sounds like a lot. But the same steps repeat, and Claude does the building. Your part is the examples, the check and the go.

just drop the files. *Claude does the board.*

You never fill in the board or build the pool. You put your finished files in the folder. Claude reads them and does the rest.

You	▸	Claude	▸	The board	▸	You
drop the files		reads every file		fills in		look and say go

A

Put the week's files in your folder

Do this: after you like the week, upload its folder to Google Drive (chapter 5).

B

Tell Claude to read it

Do this: open a chat and paste this. Put your Drive folder link where it says.

PROMPT · READ MY FOLDER AND UPDATE MY BOARD

```
Read this week's folder: [DRIVE FOLDER LINK].
Add every post to my pool and update my Content Board.
Tell me what you added, then wait for my go.
```

C

Look at the board

You will see: each day of that week turns **purple** on your board. Purple means "made and waiting". Say **"go"** when it looks right.

what claude does for you

- Reads every file name. The date is in the name.
- Matches each picture and Reel to its words.
- Writes a small note for every post. This is the "pool".
- Colors your board, and sends tomorrow's posts to Blotato each morning.

FIRST TIME ONLY

Ask Claude to build your board once, with Prompt 4 in the last chapter. After that, you only drop files. The board is optional, so skip it if you want to start smaller. The next two pages are for the curious.

CHAPTER 6 · THE POOL

the waiting room *for your posts.*

The pool is where finished posts wait for their day. Think of it like a waiting room at a doctor's office. Each post sits there until it is called.

why use a pool?

Blotato can only hold a limited number of posts in its line at once. Its calendar also gets hard to read when many pages are mixed together.

The pool fixes both. You can build weeks ahead. The pool holds everything. Only tomorrow's posts ever go into Blotato.

THE GOOD NEWS

You never move posts yourself. Claude puts them in the pool, and a helper sends them to Blotato every morning.

what is inside *one pool entry.*

Each post in the pool is one entry. An entry is just a small card with these things on it:

ON THE CARD	WHAT IT MEANS
page	Which page it is for, like ads_fb for the Facebook page and ads_ig for Instagram.
date, time	When it should go out, in your own time zone.
kind	text, pic (a picture) or reel.
text	The full caption, exactly as it will show.
firstComment	The one comment added right under the post.
mediaUrl	The Google Drive link for the picture or Reel. Empty for text posts.
status	"pending" while it waits. It changes to "scheduled" after it goes to Blotato.
batch	A label for the week, like "Week 7 Dec 4-10".

Every entry gets a name built the same way: page, date, time, kind. That makes copies impossible and every entry easy to find.

THE MORNING SENDER

A small helper runs every morning at the same time. It finds every pending post for today or tomorrow, sends it to Blotato, and marks it scheduled. If Blotato is full, the post stays pending and the helper tries again the next morning. Nobody has to remember anything.

one word *sends your link.*

You never have to send links by hand. A comment word does it for you.

Someone comments "GUIDE" under your post ▸ **Blotato** sees the word ▸ **They get** a message with your link

1 **Every post gets one first comment**

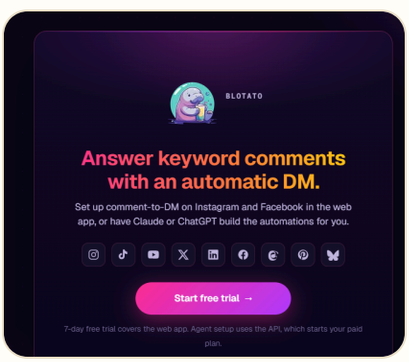

You add it under your own post. It says the next step in plain words, like "Comment GUIDE and I'll send you the free guide." Do not put a link in the comment.

2 **Keep the word list tiny**

Four or five words in total, one word for each link. Pick plain words that fit the post. Fewer words means fewer chances to send the wrong link.

3 **Let Blotato send the message**

In Blotato, open **DM automations** and make one automation for each word. When someone comments the word, Blotato replies and sends the link by direct message (DM).

This is Blotato's own page for it. It works on Instagram and Facebook.

Two ways to set it up: click through it yourself in Blotato, or ask Claude to build the automations for you.

Each one has three parts: which page, the word people comment, and the message with your link.

Blotato says its 7-day free trial covers the web app. Setting up through Claude uses their API, which starts the paid plan. Check their page for the latest.

two safety rules.

4

Never send messages by hand in bulk

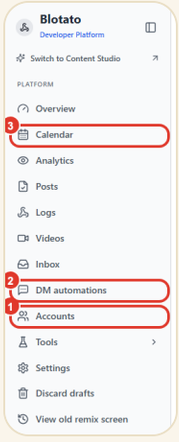

Why: Facebook can lock an account that messages lots of people by hand. Automations are the safe way.

5

Switch an automation on only when its product is ready

Do this: if a word's product is not published yet, leave that automation off. Do not use that word in any post.

Why: otherwise people comment and get nothing.

Where to find it: in Blotato's left menu, click **DM automations** (2). That is where you turn each automation on or off.

Add one word at a time. Test it by commenting the word yourself on a post, from another account.

so nothing is *ever lost.*

A backup is a safe copy. Make one every week, right after your weekly build. If anything ever breaks or gets deleted by mistake, you can put it back.

1

Ask Claude to export the pool

Claude saves every pool entry as one data file and one spreadsheet file, plus a copy of the board's saved state. Use Prompt 5 in the last chapter.

2

Zip it with the date

A zip is one file that holds many files. Name it with the real date.

```
BACKUP_Oct27_2026.zip
  ├ pool.json
  ├ pool.csv
  └ board-saved-state.json
```

3

Put it in Drive

Upload it to one fixed folder in Google Drive, like one called Blotato.

4

Check your links

Ask Claude to open every media link in the pool without signing in. If one does not open, fix it before its day.

5

Write the date on the board

The board shows "Backed up" with the date, so you never wonder.

6

Delete the raw files

Once the posts are safe in Drive, delete the raw clips, songs and photos. Keep your brain file and your free guide files.

see every day *at a glance.*

You do not need the board on day one. Add it once you have a few weeks of posts in the pool.

1. Each row is one of your pages.
2. Each column is one day.
3. Purple means posts are waiting in the pool.
4. Green means that day is full and done.

Yellow means some posts are missing. Red means nothing is scheduled. Each box shows how many posts that day has.

Above the grid is a to-do list. When a page is almost out of posts, the board says "Create content for this page" and shows the date it runs out. Tap **Refresh** to update it. The board also shows the date of your last backup.

HOW TO GET YOURS

The picture above is my own board. You do not copy mine. Ask Claude to build yours with Prompt 4 in the last chapter. You never write any code.

TWO WORDS IN THAT PROMPT

Database just means a saved list. Claude keeps your waiting posts in it, so the board can read them. **Scheduled task** means a job Claude does on its own at a time you pick, like "every morning at 7." Claude sets both up for you. If the Claude app on your computer is closed, a job that needs your folders waits until you open it again. If any of this feels like too much, skip the board for now. The guide works without it.

different pages, *same machine.*

The system does not change when you add a page. You add a row to the board, a section to the brain file, and a page code to the pool. I run all of these in the same weekly session:

PAGE	EACH DAY	WHAT MAKES IT DIFFERENT
Digital page (Facebook + Instagram)	4 text, 4 pictures, 4 Reels. Pictures and Reels also on Instagram.	Black and gold. Teaches people to build online without showing their face.
Bible page	5 posts, a mix of Reels and pictures	Faith posts and a free peace guide.
Quotes page (Facebook + Instagram)	7 a day, the same on both	Quote pictures and Reels. The Instagram copy is its own pool entry.
Cooking page	1 text, 1 picture, 1 Reel	A new page. Each product gets its own comment word.
Pinterest	1 pin per board	One account, a board for each page. Only my own links.

MY ADVICE

Start with one page. Add the second only when the first one runs without effort.

before you say *go.*

- [ ] Every post has a first comment.
- [ ] No prices, no income claims, no ages in any text.
- [ ] Every comment word is on my short list, and its automation is on.
- [ ] Every Reel is 10 seconds with a new clip and a new song.
- [ ] No clip shows a person or an animal.
- [ ] File names start with the week's date.

Before the week starts: the week's folder is in Drive and shared by link, the board shows purple for every day, and a backup is saved.

when something goes wrong

PROBLEM	WHAT TO DO
A clip will not download	Ask Claude for a different clip.
A post did not reach Blotato	Check its date on the board. A date in the past will not go out. If Blotato was full, it tries again the next morning.
A picture does not show on Facebook	Open the Drive link in a private window. If it asks you to sign in, change sharing to "Anyone with the link".
The board says a page is running low	That is the reminder working. Build the next week for that page.
Two pool entries have the same name	The later one replaced the first. Check the week label and the time.
Claude stops sounding like you	Tell it to read your brain file again. Then add the missing rule to the file.

the exact words *I give Claude.*

How to use them: copy a box, open a new chat in Claude, click the typing box and paste. Change the words in [square brackets]. Press Enter.

Prompt 1 does this: Claude asks you questions and writes your brain file.

PROMPT 1 · INTERVIEW ME AND CREATE MY BRAIN FILE

```
I run a faceless Facebook page called [PAGE NAME]. My promise is: [WHO] [WHAT] without [OBSTACLE].

Interview me, one question at a time, to build a content brain file. Cover: my brand and the faceless rule, my voice and words I never use, my real offers and links, my colours and fonts, my post formats, my comment keywords, and the rule that you must show me everything in a folder and wait for my "go" before scheduling.

Include two rules at the top: (1) always model content on examples I give you, never invent a format; (2) only mention offers listed in this file. Also add: no prices, no income claims, no ages, and no photos of me.

When we are done, save it as a markdown file in my folder called CONTENT RULES.md.
```

Prompt 2 does this: Claude builds your whole week and waits for your go.

PROMPT 2 · BUILD A WEEK OF CONTENT

```
Read CONTENT RULES.md first. Build [WEEK NAME], [START DATE] to [END DATE], for [PAGES].

Daily target per page: [e.g. 4 text, 4 pictures, 4 Reels].

Use these new examples as extra angles: [PASTE OR ATTACH EXAMPLES].

Rules for this build: every Reel gets a new Pexels video and a new Pixabay music track; every picture gets a new Pexels photo when its layout uses one; check every clip for people and animals; rotate the five picture layouts; vary the hook styles; every post gets a first comment using only these keywords: [KEYWORDS].

Save everything in a folder called [WEEK NAME - dates]. Start every picture and Reel file name with the batch date. Add one review page that shows all of it. Do not schedule anything. Tell me when it is ready and wait for my go.
```

pool and board *prompts.*

Prompt 3 does this: Claude puts your uploaded week into the pool.

PROMPT 3 · ADD THE WEEK TO THE POOL

```
Go. I uploaded the [WEEK NAME] folder to Google Drive here: [DRIVE FOLDER LINK].

Match each picture and Reel to its post by file name and size. Then write one pool entry per post to the Content Board with: page, date, time, kind, text, firstComment, mediaUrl (public Drive link), status pending and the batch label. Use the entry name page_date_time_kind. Do not write any entry dated in the past. When you are done, tell me how many entries you added and for which dates.
```

Prompt 4 does this: Claude builds your Content Board page.

PROMPT 4 · BUILD MY CONTENT BOARD

```
Build me a Content Board as a web page that I can keep and refresh.

It needs:
- A grid with one row per page ([LIST MY PAGES AND DAILY TARGETS]) and one column per day for the next 8 weeks, with a total row.
- Each cell shows the number of posts that day and how many are missing against the target. Colour it: green when full, yellow when some are missing, red when nothing is there, purple when posts are waiting in the pool.
- A week label row above the dates.
- Page names and dates pinned while I scroll, in both directions.
- A to-do list above the grid that says "Create content for [page]" with the date it runs out, when a page has about three days or fewer left.
- Click a day to see its posts.
- A Refresh button that reads my scheduled posts from Blotato and the pool, then rebuilds the board.
- A small line under the title showing the date of my last backup.
- Black and gold colours: [YOUR COLOURS].

Store the pool in the page's database, one document per post, using these fields: page, date, time, kind, text, firstComment, mediaUrl, status, batch. Also set up a scheduled task that runs every morning at [TIME] my time, moves pool posts dated today or tomorrow into Blotato, marks them scheduled, then refreshes the board.
```

backup *and clean-up.*

Prompt 5 does this: Claude makes your weekly backup and shows you what to delete.

PROMPT 5 · WEEKLY BACKUP AND CLEAN-UP

```
Back up my Content Board.

Read every entry in the pool and save them as one JSON file and one CSV, plus a copy of the board's saved state. Zip them as BACKUP_[DATE].zip and put the zip in my Google Drive folder called [FOLDER]. Then open every media link in the pool without signing in and tell me if any fail. Finally, update the backup line on the board with today's date.

After that, list the raw clips, tracks and photos in my Downloads folder and show me what you plan to delete. Wait for my go before deleting anything.
```

A NOTE FROM ME

one last thing, *from me to you.*

I know this was a lot of pages. Thank you for trusting me with them.

I have worked for myself for over 17 years, and I have not had a job since. I am telling you so you know I have been where you are: unsure, a little nervous, and wondering if this can work for someone like me.

This system is how I stopped doing everything by myself. It is not magic. It is small steps, one at a time, with Claude doing the heavy part.

So start small. One page. One week. Build your brain file first, then the weekly build, then the pool. Add the board and more pages when the first week feels easy. If you get stuck, go back to the page and ask Claude. It never gets tired of questions.

You do not have to be perfect. You only have to begin. I am so proud of you for starting.

With all my heart,

Josée Bédard
